(54) CIRCUIT AND METHOD FOR DRIVE OF MOTOR AS WELL AS SEMICONDUCTOR INTEGRATED-CIRCUIT DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To drive a motor at a low noise using a comparatively simple circuit.

SOLUTION: A plurality of command signals are generated according to the rotational speed of the motor. When any one of the plurality of command signals is selected on the basis of the magnetic-pole position of the motor, modulated waves are created. A power converter, which is used to supply drive electric power to the motor on the basis of the modulating waves, is controlled by means of pulse width modulation.

LEGAL STATUS

[Date of request for examination] 13.12.2001

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other]

than the examiner's decision of rejection or
application converted registration]

[Date of final disposal for application]
